

# Help the Local Fish Find Their Way Home!

Trace the lines to help the freshwater fish return to their native habitat.

**Sunfish**

Nest in sand or gravel bottoms and enjoy shallow water with lots of vegetation for protection from predators and strong currents.

**Largemouth Bass**

Build nests near brush bundles as this underwater 'tree fort' gives them a place to rest and capture prey.

**Walleye**

Live near spawning beds made of rock because they can safely lay their eggs in the spaces between the rocks.

**Yellow Perch**

Lay their eggs on natural woody debris and vegetation to improve their spawning success and abundance.

**Northern Pike**

Prefer areas of the water that are shaded by tall trees and large weeds because it makes the water cooler.

**Smallmouth Bass**

Build nests near brush bundles as this underwater 'tree fort' gives them a place to rest and hide from predators.
